What happened last week?

- Many deadlines

- Managed testing and deployment, app provides a way to sign in, the app provides a way to register, the app automatically deletes a user from the group, the app removes a hard coed user from the group, the app creates a user named study group, the app persists the groups to the database, navbar introduced.

- 8 Developer stories completed

- Working on testing in the azure deployment using Mongo Atlas

Personal Retrospectives:

Duncan

I managed to create the login and registration functions, this will allow sessions to be enabled for future user stories. I also looked in to managed the testing and

deployment through travis. Coveralls is working as well as build testing, but the deployment needs further work.

Tori

I managed to persist group to the database, create a user named group, remove a user selected group and remove a user selected member from a group. I attempted (struggled) to set up automated end-point testing. Duncan managed to set it up by the end of the sprint but I didn't have time to set up the tests unforch.

Blake

I managed to create a navigation bar, but due to other deadlines and technical difficulties I could not do more for this sprint.

Jon

Tori got me up and running with the current Github, Mongo, the pathing etc. I spent weekend with Mongo, Express, EJS, Bootstrap and watching Yelp videos. Will try to get my first story up by Friday-ish this week. Had issues with new computer and other assignments in the past week. *A new week is upon us!*

Josh

I did not manage to finish any developer stories this week. I am still learning some of the fundamentals. Going through the Yelp videos as well as a MongoDB tutorial.

What are we doing this week?

Improving nav bar, adding members to groups, adding to links to groups, making poll system, user location data, meeting location recommendations

Potential blockers?

Assignments due on 19th May. Keep everyone communicated on progress.

Velocity

8 dev stories / 1 week = 8 d.s./week

6 last week.

Spring velocity = 7 d.s/week average
